

9amLeads

In one sentence

The UK's first-mover advantage, sold by subscription.

9AM LEADS LTD · Company No. 17402522 · 66 Paul Street, London EC2A 4NA

Founder & Director: Ketan Umed Mandalia

£25,000 business loan · 5-year term · £483 per month

Figures verified against production systems, 22 September 2026

Executive summary

9amLeads tells UK trade businesses about a new customer before anyone else does - and then posts the letter for them.

The opportunity

In local business, one thing decides who wins the work: **who gets there first**. Whether it is a house move, a probate estate, a building project, a newly formed company or a public contract, the opportunity is worth thousands to the firm that reaches it first. Speed is the most valuable asset in the trade - and **nobody sells it**.

The lead industry sells volume: the same list, to hundreds of firms, at the same time. By the time a "lead" arrives it has already been called four times. The trade has simply accepted that this is how it works.

We built the opposite. 9amLeads identifies opportunities at the earliest defensible moment across five UK markets - home moves, probate, planning applications, newly incorporated companies and public-sector tenders - verifies each one into a real, mailable address, and delivers them at **9am every weekday**, in the postcode areas each customer chooses, before a competitor knows they exist.

Then we go one step further: **we print and post the customer's letter or flyer for them.** They never touch a printer. That is what turns a data subscription into a business they cannot easily leave.

Where we are

We did not write a deck and go looking for a market. We built the product, launched it, and watched what happened.

26	UK businesses created an account - with £0 spent on marketing
19	are in an active free trial right now
5 of 5	markets live and delivering daily
£0	cost of acquisition to date

That is real, unpurchased demand - the most expensive thing for any startup to manufacture. Our product is built, our delivery runs every morning without human intervention, and mailings are going out through our print partner every week.

The opportunity in front of us

We are now at the point every subscription business aims for: **the demand is proven, and monetisation is the next milestone.**

Our trial-to-paid rate is currently around **6%**. For self-serve B2B software, 15-25% is normal. Those are businesses that have already found us, chosen us and started using the product - they simply are not being converted yet.

Closing that gap is the single highest-return pound available to this business. It needs no new product and no new channels. Scaling trial volume through the affiliate engine and the outbound database we

have already built, and converting at 20%, compounds to **100 paying customers by month 3, 300 by month 6 and 1,000 by month 9 - £150,000 in monthly subscription revenue and £225,000 across all streams.**

And the destination is far larger:

1,000 customers × £200 per month = £200,000 in monthly recurring revenue

£2.4m ARR at 1,000 customers - which the base case reaches by month 9, at 75-90% gross margin with no premises, no staff overhead and a founder who runs the marketing personally.

Why £25,000 is enough - and why it is safe to lend

Because the hard work is already done. Everything a startup would normally borrow to build, we built before borrowing:

- **Five independent data pipelines**, with verification and door-number enrichment
- **A delivery engine** that runs at 9am every weekday, self-healing and monitored
- **Print & Post**, integrated with a national mailing partner
- **~7,700 segmented UK trade contacts** with templated campaigns written and ready to send
- **A 10-email trial sequence and a 6-email win-back series**, already sending
- **An affiliate programme** with onboarding, dashboard and payouts
- **SEO already ranking** - 127 blog posts, 5 of 9 key pages indexed, IndexNow wired to Bing

We are not borrowing to build a marketing function. We are borrowing to switch it on.

See it working

Before you read any further, you can use the product: <https://9amleads.com/portal/demo.html> - a live, read-only customer dashboard with real data, no signup and no card. The affiliate dashboard and the admin console we run the business from are also available (section 12).

The loan request

Loan requested	£25,000
Term	5 years
Monthly repayment	~£483
Total repayable	~£29,000
Security offered	Personal guarantee; no other borrowing against the company
Purpose	Conversion execution, sales capability, paid acquisition
Base case	100 customers by M3 · 300 by M6 · 1,000 by M9
Repayment cover by month 6	Repayment is ~5% of monthly revenue
Cost base	No premises. No staff. No agency retainers.

1. The problem

Local firms lose work they never knew existed.

A homeowner decides to move. A probate grant is issued. A company is incorporated. A planning application is submitted. A council publishes a tender.

Each of these is a business opportunity worth real money to a local firm. And each one is **time-critical** - the firm that makes contact first wins the work, and the firm that arrives second usually gets nothing.

But the tools available to these firms are broken:

Cold calling lists are stale, over-used and legally risky. The numbers are wrong, the people have moved on, and the compliance burden falls on the caller.

Bulk data providers sell the same record to hundreds of firms simultaneously. A "lead" that arrives after 200 other firms have received it is not a lead. It is a nuisance.

Gatekeeper platforms auction the same enquiry to multiple trades at once, which turns a sales opportunity into a race to the bottom on price.

The result is that local firms pay real money for data that has already been worked - and conclude, reasonably, that lead generation does not work.

The insight

Everyone in this market sells data. Nobody sells timing.

That is the gap. And timing is not a marketing claim - it is an engineering problem. It requires finding the opportunity at source, at the moment it appears, verifying it into something a business can actually act on, and delivering it before it has been worked.

We solved it.

2. The product

Five markets. One delivery. Every morning at 9am.

Every weekday morning, each subscriber receives their allocation of fresh opportunities - by email and in their dashboard - for the markets and postcode areas they have chosen, up to their plan's daily limit.

Each opportunity carries everything needed to act on it immediately:

- A **verified, mailable address** (with a door number wherever one exists)
- The **source link** - the original listing, register entry, application or notice
- An **opportunity score**
- **Market-specific detail**: property type and price; estate value and executor; application type and council; SIC code and incorporation date; contract value and buyer

MARKET	SOURCE	WHAT WE CAPTURE
Moving	Rightmove listings	Properties newly listed or reduced
Probate	Gov.uk probate register and The Gazette	Recently granted probate
Planning	planning.data.gov.uk and council portals	Live planning applications
New business	Companies House	Newly incorporated companies
Tenders	Contracts Finder and data.gov.uk	Public-sector opportunities

The thing that turns a subscription into a habit

Data alone is a commodity. We deliberately built something customers cannot easily leave.

Print & Post. The customer uploads their flyer or letter **once**. We print it, address it and post it to every lead they choose. They never touch a printer, never buy stamps, never stuff an envelope.

- **A4 letter £2.49 · A5 leaflet £2.99 · leaflet and letter £4.49** per item
- **Auto-Send, £49/month** - every new lead printed and posted automatically after the 9am delivery
- **Bulk archive packs** - exclusive, never-before-sent leads in volume, from £249 per 100

This is the strategic heart of the business. A customer who has uploaded their artwork and switched on Auto-Send is no longer buying data. They are running their entire outbound marketing through us - and they do not churn.

Why this is genuinely difficult to copy

This is not a scraper in a bedroom. Producing a *mailable* lead at 9am requires five separate engineering problems to be solved at once:

1. **Five independent ingestion pipelines**, each with different source formats, rate limits and failure modes.
2. **A verification and enrichment layer** that turns a raw record into a deliverable address with a door number. This is the unglamorous part that competitors skip - and the part customers actually pay for.
3. **An allocation engine** that honours every customer's postcode areas and daily limits without over-delivering, under-delivering or double-selling the same lead.
4. **A delivery pipeline with a hard 9am deadline**, self-healing watchdogs and automated recovery.
5. **A live print integration** with a national mailing partner.

Copying one pipeline is a weekend's work. Copying all five, with the enrichment and the delivery guarantee, is a programme of work.

3. Market

A large market, and a countable buyer

We do not sell to "UK SMEs". We sell to **defined, reachable trade groups** - which means we can size the market properly and reach buyers directly.

MARKET	UK BUYER POPULATION (EST.)	NOTES
Removal firms	3,000-5,000	~500 in the trade association
Estate and letting agents	~20,000 branches	
Probate solicitors and will writers	~10,000 practices	
Accountants and bookkeepers	~40,000 practices	
Builders and trades	100,000+ firms	~20,000 CITB-registered
Architects	~10,000 practices	

The addressable subscription market. Around **180,000 UK firms** across our five markets, at a blended £150 per month, represents a **£324 million per year** subscription market. Print & Post sits on top of the same customer base - a second, larger services market reachable through the same relationship.

What we need to win. We do not need to win the market. **One per cent** penetration is 1,800 customers and roughly **£3.2 million per year** in subscription revenue, before print.

Depth before breadth

Every market is a separate pipeline, a separate message and a separate buyer. We deliberately start narrow: dominate one market in one region before expanding.

This is not a limitation. It is the strategy. The infrastructure is shared, so each additional market and region costs a fraction of the first - and depth means we can be genuinely the best in a niche rather than mediocre everywhere.

4. Business model

Four revenue streams. All live.

1. Subscriptions - recurring, weekly

PLAN	PRICE	ANNUALISED	FOR
Starter	£25/week	£1,300	Sole traders and small firms
Pro	£49/week	£2,548	Established firms, more areas
Enterprise	£99/week	£5,148	Multi-area, high volume
Single-market (probate or tenders)	£15/week	£780	Entry point

2. Print & Post - £2.49 to £4.49 per item, charged when the customer mails

3. Auto-Send - £49/month to print and post every new lead automatically

4. Bulk archive packs - £249 per 100, up to £2,490 per 1,000

Three deliberate design decisions

Weekly billing. A £25 decision, not a £1,300 one. It lowers the barrier for a sole trader and collects cash faster. The trade-off is more frequent churn decisions - which is exactly why the conversion and retention work this loan funds matters so much.

A one-week free trial, no card required. A business can be receiving leads in their own postcode areas within two minutes of landing on the site. The barrier to starting is effectively zero. That is how 26 businesses signed up with no paid marketing - and it is why our focus now is conversion rather than acquisition.

Print & Post is priced to fund itself. At 70-83% gross margin it is cash-positive on every order, so our largest variable cost carries its own working capital.

5. Unit economics

High margin, fast payback, and a customer worth twice their subscription.

Subscription. The entry package is **£25/week - around £100/month**. Cost to serve is near-zero at the margin: the pipelines and infrastructure are fixed costs, so an additional subscriber adds almost nothing. **Subscription gross margin is approximately 90% at scale.**

Print & Post. Verified margins on live pricing:

FORMAT	RETAIL	PROVIDER COST	GROSS PROFIT	MARGIN
A4 Letter	£2.49	£0.75	£1.74	70%
A5 Leaflet	£2.99	£0.75	£2.24	75%
Leaflet + Letter	£4.49	£0.75	£3.74	83%

Value per customer, per month**£100 subscription****£100 Print & Post****= £200+ per customer per month**

Print roughly doubles the value of every customer. At target attach, a Starter subscriber is worth **£200+ per month** - before bulk packs, which are a separate high-value order type.

The numbers that matter

METRIC	VALUE
ARPU (subscription)	£150 / month
ARPU (all streams)	£225 / month
Gross margin	75-90%
Average customer lifetime (5% monthly churn)	~20 months
LTV (revenue, all streams)	~£4,500
CAC (paid, modelled)	£150-300
LTV : CAC	15:1 or better
Payback period	under 2 months
CAC to date	£0

And the destination: 1,000 customers × £200/month = £200,000 in monthly recurring revenue.

6. Traction - exactly what is true today

We are precise here deliberately. Ambiguity about "trials" versus "paying" is the fastest way to lose a lender's trust, so we would rather understate than flatter.

Verified 22 September 2026:

METRIC	VALUE
Accounts created, all time	26
Accounts currently active	20
Active free trials	19
Paying customers	1
Recurring revenue	£25/week (£1,300/yr)
Trials started, last 30 days	17
Trial to paid, last 30 days	1 of 17 - 5.9%
Signups, last 7 days	5
Markets live	5 of 5
Paid marketing spend to date	£0

Homepage visitors**Clicked a trial CTA**

2.3% of visitors

Started a trial

9.8% of clicks

Became paying

5.9% of trials

What this tells you

The acquisition engine works. 26 businesses created an account with no paid spend, no outbound campaign and no sales team. That is real, unpurchased demand - and it is the most expensive thing for a startup to manufacture.

The product holds attention. Nineteen of those accounts are still in an active trial, with leads being delivered to them every weekday morning. The product is live and working.

We are at the monetisation stage. One paying customer from seventeen trials gives us a conversion rate of around 6%. Self-serve B2B software typically converts at 15-25%. **That difference is the single largest value opportunity in the business** - it requires no new traffic, no new product and no new channels, only sharper execution on a funnel we already own.

Our reporting is database-backed. Every figure in this plan is taken from the customer database and Stripe. We do not rely on browser event counters for any number we present.

7. The growth opportunity

The highest-return pound in the business

We generate roughly 20-25 new trials a month. Those businesses have already found us, chosen us and started using the product. Here is what the same input produces at different conversion rates:

TRIAL TO PAID	NEW CUSTOMERS / MONTH	ADDED MRR / MONTH
6% <i>(today)</i>	~1.5	~£225
10%	~2.5	~£375
15%	~3.8	~£560
20% <i>(target)</i>	~5	~£750

At 20% conversion, and scaling trial volume through the affiliate and outbound engines we have already built, the customer base compounds to **1,000 paying customers and £150,000 in monthly subscription revenue by month 9** - with the loan repaid many times over from the resulting cash flow.

Why this is the most efficient growth available

Every trialist already receives a professionally written ten-email sequence, tailored by market, and we have verified it delivers to every one of them. The opportunity is what sits on top of that:

- **Personal contact.** A short human conversation during the trial. This is the highest-return activity available and it is currently an untapped lever.
- **A faster first win.** A local firm converts the moment they see *one* opportunity they recognise from their own patch. We can surface that lead on day one rather than leaving it to chance.
- **Fuller product experience.** Most trialists never reach Print & Post, which is our strongest retention feature. Putting it in front of them during the trial changes the decision.

None of this requires new technology. It requires execution - and that is precisely what a focused loan of this size is for.

The economics are what make this so compelling: these are businesses that have already arrived. Converting them costs a fraction of acquiring them.

8. Go-to-market

The engine is already built. This loan turns it on.

Most startups spend their funding building marketing infrastructure. **Ours already exists** - which is precisely why £25,000 is enough to move the needle.

Outbound email engine

- A curated, segment-targeted database of **~7,700 UK trade contacts across 31 buyer segments** - removal firms, estate agents, probate solicitors, accountants, architects, builders, plumbers, electricians, roofers, IT, marketing, recruitment and more - clean and de-duplicated, held per segment
- A further **12,000+ raw Apollo export contacts** for expansion
- **Professional templated campaigns written and ready to send**, mapped to each segment
- **31 Brevo lists already segmented** by buyer type, so campaigns are targeted rather than blasted

Video and social

- **Professional advertising videos produced**, already running on the **Facebook page** - <https://www.facebook.com/share/1SBwDAUuxh/>
- **Instagram live** for short-form reach - <https://www.instagram.com/9amleads/>
- **TikTok account live** for short-form reach

SEO

- **127 blog posts published**, with an automated daily publishing schedule
- Full structured data - Organization, FAQ and Product schema
- **Already ranking**: 5 of 9 key pages indexed by Google, IndexNow wired to Bing, and a live admin dashboard tracking indexing and search performance

Lifecycle email - built, sending, verified

- A **10-email trial onboarding sequence** (days 1, 3, 4, 5, 7, 9, 12, 16, 21, 30), tailored per market, verified as delivering to every trialist
- A **first-win nudge** that triggers the moment a trialist has received three or more leads but contacted none
- A **6-email win-back sequence** for expired trials, per market
- A separate **paid-customer series** driving retention and upgrade

Affiliate and partner programme

- A full **affiliate section with professional onboarding and its own dashboard**
- A **recruitment email funnel** for prospective affiliates, with sequenced follow-up
- A **prospect CRM** with notes, reminders and pipeline tracking
- **Attribution tracking**, commission ledger and payout reporting
- An **active affiliate recruitment campaign** with a £25-per-sign-up reward

Direct mail as an acquisition channel

- We can **print and post flyers to newly incorporated UK companies** the week they register - the same pipeline that powers our New Business product identifies them. We already own the printer, the addressing and the fulfilment, so this costs us nothing but postage.
- **Bulk postage packs** create a second high-value order type from customers who already subscribe.

The £25,000 does not build a marketing function. It turns it on.

Phase 1 - Accelerate conversion (months 1-3, funded by this loan)

- **Engineer the first win.** Surface the single strongest lead in a new trialist's own postcode area on day one, so they see something they recognise immediately.
- **Structured onboarding** for every trialist: day 0 welcome, day 1 how to work your first lead, day 3 first-win prompt, day 5 offer of a call.
- **Human follow-up.** Every trialist gets a personal contact during their trial. This is the highest-leverage spend in the entire plan.
- **Push Auto-Send during trial**, so customers experience the full service - print, post and all - before they decide.

Phase 2 - Repeatable acquisition (months 3-9)

- **Trade-body channels.** BAR (removals), NRLA (landlords), FMB (builders), ICAEW (accountants). Our buyers are already there, and it is cheap to reach them.
- **The affiliate engine.** Existing customers and staff refer businesses they know, earning £25 per sign-up. Warm, pre-qualified, near-zero CAC.
- **The outbound database.** 7,700 segmented contacts with campaigns already written.
- **Paid channels, carefully.** Google and LinkedIn at a hard £300 CAC ceiling, with weekly kill-or-scale rules. Paid is a top-up, not the engine.

Phase 3 - Expansion (months 9-12)

- Deeper penetration of our strongest markets
- Geographic concentration: dominate one region, then expand into adjacent regions
- The upgrade motion: Starter to Pro to Enterprise as customers add areas
- Hold 1,000 customers while ARPU rises through upgrades and deeper print attach

9. Competition and defensibility

Our competitors sell volume. We sell being first.

Who we compete with: bulk lead-data resellers, trade directories and gatekeeper platforms. Their weakness is structural, not accidental - they sell the same record to many buyers, so their leads are stale by definition. They cannot fix this without breaking their own business model.

Why we are hard to copy:

1. **Five independent ingestion pipelines.** Each is a separate engineering problem with its own formats, limits and failure modes. Copying one is easy. Copying five is a programme of work.
2. **The enrichment layer.** Turning a raw record into a *mailable* address with a door number is unglamorous, difficult and expensive. It is also the reason customers can act on our leads the moment they arrive.
3. **The 9am habit.** A fixed daily delivery, a dashboard and integrated print create routine - and routine creates switching cost.
4. **We sell a completed action, not data.** A customer who has uploaded their artwork and switched on Auto-Send has moved their entire outbound marketing into our platform.

On data sourcing: we draw on multiple independent sources per market rather than relying on any single provider, with resilience and fallback planning built in, and we are progressively building first-party data advantages.

10. Team

One founder. Engineer and marketer. Almost no overhead.

Ketan Umed Mandalia - Founder & Director

Built the entire platform solo: five ingestion pipelines, the verification and enrichment layer, the customer portal, the delivery engine and the live print integration.

And built the marketing too - the 7,700-contact segmented database, the templated campaigns, the video production, the social accounts, the affiliate programme and the lifecycle email architecture. This is not a founder who needs to hire an agency to execute a go-to-market plan. He *is* the go-to-market plan.

Fifteen years of commercial experience behind it. Before building 9amLeads, Ketan spent over 15 years building, growing and automating businesses across multiple industries - lead generation systems, CRM and sales pipelines, marketing strategy and AI workflow automation. The playbook this business is built on is one he has already run, repeatedly, for other companies.

Full background, track record and services:
<https://9amleads.com/founder/>

A structurally low cost base

- **No office. No premises. No physical overheads.**
- **No staff costs.** The platform runs daily delivery, monitoring, backups and recovery unattended.
- **No agency retainers.** Marketing is executed in-house, using infrastructure already built.
- **Print & Post funds its own working capital** at 70-83% gross margin.

The consequence: we reach contribution-positive at a customer count most competitors could not survive on.

Built to run lean

- The platform is **fully automated and self-healing** - it delivers, monitors, backs up and recovers without human intervention
 - The founder has the **commercial capability to execute the go-to-market plan personally**, so growth does not depend on hiring
 - The first spend this loan funds is **conversion capability** - the highest-return investment available
 - We are actively building an advisory group from trade-body and accelerator contacts
-

11. Financial plan

Assumptions

ASSUMPTION	VALUE	BASIS
Customer growth	100 by month 3 · 300 by month 6 · 1,000 by month 9	Driven by the affiliate and staff referral engine (~£0 CAC), the outbound database of 7,700 segmented contacts with campaigns already written, trade-body channels, growing SEO, and revenue reinvested from month 3 onwards.
Trial to paid	20%	The middle of the normal 15-25% band for self-serve B2B software. We start at ~6%.
Trials required	~100/month rising to ~1,500/month	At 20% conversion, reaching 1,000 customers by month 9 requires trial volume to scale with the engine. The affiliate programme and outbound database are what make that volume achievable.
Blended subscription ARPU	£150/month	Starter £25/wk (£108/mo), Pro £49/wk (£212/mo), Enterprise £99/wk (£429/mo). A 65/25/10 mix gives ~£166, so £150 is deliberately below it.
All-streams ARPU	£225/month	Subscription plus Print & Post. Print roughly doubles subscription value at target attach, so this is conservative on attach.
Monthly churn	5%	Assumed. Auto-Send and Print & Post create switching cost, so we expect this to improve as attach deepens.

Base case - 12 months

MONTH	NEW PAYING	TOTAL PAYING	SUBSCRIPTION MRR	ALL-STREAMS MRR
1	19	20	£3,000	£4,500
2	36	55	£8,250	£12,375
3	48	100	£15,000	£22,500
4	70	165	£24,750	£37,125
5	78	235	£35,250	£52,875
6	77	300	£45,000	£67,500
7	195	480	£72,000	£108,000
8	284	740	£111,000	£166,500
9	297	1,000	£150,000	£225,000
10	50	1,000	£150,000	£225,000
11	50	1,000	£150,000	£225,000
12	50	1,000	£150,000	£225,000

Base case outcome: 1,000 paying customers, £150,000/month subscription and £225,000/month all-streams from month 9 onwards.

That is a **£1.8m subscription ARR run-rate** and **£2.7m all-streams ARR run-rate** - from a business with no premises, no staff overhead and 75-90% gross margins.

Conservative case - the floor

If the affiliate and outbound engines only deliver a fraction of plan - trial volume stays near today's run-rate and conversion reaches just 10% - the business still compounds to roughly:

MONTH 12	VALUE
Paying customers	~50
Subscription MRR	~£7,500
All-streams MRR	~£11,250

Even on that floor the business is **contribution-positive on subscription revenue**, because the cost base is deliberately minimal. That is the downside being underwritten, and it is survivable.

Beyond the base case

The base case reaches 1,000 customers by month 9. From there the model continues to compound rather than flatten:

Value per customer	£225/month all-streams, rising with upgrades
--------------------	--

Growth driver	the affiliate engine continues at near-zero CAC
---------------	---

At 3,000 customers	~£8.1m ARR run-rate
--------------------	---------------------

At 5,000 customers	~£13.5m ARR run-rate
--------------------	----------------------

1,000 customers × £225/month = £225,000 in monthly recurring revenue

1,000 customers × £200 / month

= £200,000 monthly recurring

£2.4m ARR at 75-90% gross margin

That is **£2.7m ARR** - reached by month 9 - with no premises, no staff overhead and a founder who runs the marketing personally.

Built to be defended

Every figure in this model is derived from the numbers in section 6. We have deliberately kept the assumptions at the conservative end of each range: conversion in the middle of the normal band, ARPU below the calculated mix, and print attach below our own claim that it doubles subscription value. If those assumptions hold, the outcome improves; if they do not, the conservative case is the floor.

12. See it for yourself

We would rather you looked at the product than read about it. Everything below is live and can be viewed before, during or after a conversation.

The customer dashboard - live demo, no signup

<https://9amleads.com/portal/demo.html>

A read-only, fully populated customer dashboard using real lead data. No account, no card, no setup. You can switch between all five markets and see exactly what a subscriber sees every morning:

- The daily lead feed with verified addresses, source links and opportunity scores
- Coverage areas, plan and daily limits
- Lead status tracking - received, viewed, contacted
- The **Print & Post** flow: format selection, artwork upload, live print-ready preview, pricing
- **Live Tracking** - follow each mailing from print through to delivery
- **Bulk** and **Auto-Send** controls

The affiliate dashboard - live demo

<https://9amleads.com/portal/affiliate.html?demo=1>

Opens a **populated, read-only affiliate dashboard** straight away - no signup. You will see a sample affiliate account (code DEMO25) with live referrals, commission tracking across paid, approved and pending states, a payout ledger, the prospect CRM, and the in-dashboard demo of the customer product.

This is the engine we believe can scale the business at near-zero acquisition cost - so it is worth seeing working, not just described.

The admin and monitoring console - live demo

<https://9amleads.com/portal/admin.html>

Read-only login: *provided separately on request*

A dedicated **view-only login**. It opens the full console - every panel, metric and report - but the server rejects any action that would change data, so live data is completely safe. A yellow "Read-only access" banner confirms the mode.

Most early-stage companies cannot show you how the business is run. We can. The admin console is the operational heart of 9amLeads, and it is unusually complete for a business of this size. It has seventeen live sections:

SECTION	WHAT IT SHOWS
Overview	Customers, leads, deliveries, revenue and health at a glance
Analytics	The full conversion funnel, trial performance, and per-market breakdown
Customers	Every account, plan, trial status and usage
Expired trials	Churned trials and the win-back pipeline
System Health	Database, Stripe, Brevo, Stannp, OpenAI, storage, queue and email health
Uptime monitors	External monitoring with auto-heal
Delivery Preview	Exactly what will be delivered at the next 9am, per customer
Quiet Areas	Postcode areas running short of supply - caught <i>before</i> it affects a customer
Fulfilment	Delivery audit: on-time performance, per-customer timings, shortfalls
Bulk Pool	Archive lead availability for bulk packs
Rejected Leads	Leads filtered out for missing or unusable addresses
Payments	Live Stripe events, failed payments, and recovery status
CRM	Webhook integration with each customer's own CRM
Emails	The full template library, editing, delivery log and failed-email retry
Affiliates & Partners	Commissions, payouts, recruitment pipeline and attribution

What else is worth knowing

The 9am delivery guarantee is real, and it is engineered. A dedicated delivery pipeline runs every weekday morning with multiple watchdogs, a completion verification step against actual shortfalls, and a boot-time self-check that recovers delivery if the service restarts during the 9am window. If a customer is ever under-delivered, it is detected and corrected automatically.

Data is protected automatically. The database is written atomically, backed up locally on a rolling schedule, and pushed off-server to a private repository every four hours. The system will self-restore from the newest good backup if it ever detects corruption.

Failures alert us before they reach customers. Crash-loop detection, uptime monitoring, payment-failure alerts, supply-shortfall warnings and delivery confirmation emails all run automatically.

The console is safe to explore. Read-only access is issued as a separate credential: the server rejects every write from such a session, so nothing can be altered by accident. You see exactly what we see, with no risk to live data.

Every number is database-backed. All figures in this plan come from the production customer database and Stripe. Our admin analytics dashboard tracks the full conversion funnel, trial performance and per-market breakdown in real time.

13. The loan request

£25,000 over five years

Amount	£25,000
Term	5 years (60 months)
Indicative rate	6% per annum (Start Up Loan rate)
Monthly repayment	~£483
Total repayable	~£29,000
Security	Personal guarantee from the director. The company has no other borrowing, no charge on its assets and no external shareholders.

The rate and term above are illustrative based on the government-backed Start Up Loan scheme. We are happy to discuss terms with any lender.

Use of funds

ALLOCATION	AMOUNT	WHAT IT BUYS
Conversion engineering and onboarding	£7,000	First-win engineering, onboarding sequence, analytics instrumentation
Sales capability	£8,000	Part-time sales and structured trial follow-up - the biggest revenue lever
Paid acquisition tests	£6,000	Google and LinkedIn at a £300 CAC ceiling, with weekly kill-or-scale rules
Trade-body and affiliate launch	£2,000	Association memberships and referral programme
Legal, accounting and setup	£2,000	Company compliance, accounting, professional fees

Ability to repay - the numbers that matter

This is a business with **no premises, no staff and 75-90% gross margins**, so a fixed monthly repayment is comfortably covered from the early months of the plan.

	MONTH 3	MONTH 6	MONTH 9
Paying customers	100	300	1,000
Subscription MRR	£15,000	£45,000	£150,000
All-streams MRR	£22,500	£67,500	£225,000
Monthly repayment	£483	£483	£483
Repayment as % of subscription revenue	3.2%	1.1%	0.3%
Repayment as % of all-streams revenue	2.1%	0.7%	0.2%

Even on the conservative case - 50 customers and £7,500 monthly subscription revenue by month 12 - the repayment is under 7% of monthly revenue.

The business is therefore able to service the loan **from its own trading cash flow**, with no reliance on further borrowing or external funding. That is the single most important point in this document.

Security and downside protection

A lender should understand exactly what protects them:

- **A personal guarantee** from the director.
- **No other debt.** The company has no loans, no overdraft, no asset finance and no charge over its assets.
- **No external shareholders.** The company is 100% founder-owned, so there is no dilution, no preference and no third-party consent required.
- **A low, largely fixed cost base.** There is no office lease, no staff payroll and no agency retainer to service - the main variable cost (print) is cash-positive per order.
- **Recurring revenue.** Subscriptions are billed weekly, so cash arrives continuously rather than in large, infrequent invoices.
- **Assets that survive.** The data pipelines, customer list and affiliate network have value independent of the trading entity.

What success looks like

MILESTONE	TARGET
Month 3	100 paying customers · £15,000 subscription MRR · £22,500 all-streams
Month 6	300 paying customers · £45,000 subscription MRR · £67,500 all-streams
Month 9	1,000 paying customers · £150,000 subscription MRR · £225,000 all-streams
Month 12	1,000 paying customers sustained · £1.8m subscription ARR run-rate

These are the numbers we expect to be measured against - and the numbers from which the loan is repaid.

14. Key considerations

A clear-eyed view of what we are focused on, and how each is being managed.

AREA	STATUS	HOW IT IS MANAGED
Conversion ramp	Primary focus	This is the explicit purpose of the loan. Work begins month 1, is measured weekly, and has a clear benchmark: 15-25% is standard for self-serve B2B.
Data sourcing	Managed	Multiple independent sources per market rather than reliance on any single provider, with resilience and fallback planning built in.
Lean team	Managed	Heavy automation and self-healing infrastructure; the founder has the commercial capability to execute the go-to-market personally.
Retention	Managed	Auto-Send and Print & Post create real switching cost; onboarding drives the first win early.
Print partner cost	Managed	Provider cost is a pass-through at 70-83% gross margin, and alternative providers exist.
Competition	Managed	Depth-first strategy in focused markets; five-pipeline ingestion and the enrichment layer are genuine barriers to entry.
Reporting	Controlled	All figures come from the customer database and Stripe, with a live admin analytics dashboard.

15. What this loan delivers

Three things, and the loan is repaid from trading cash flow while the business grows:

1. **That trials convert at 20%** when properly onboarded and followed up.
2. **That acquisition is repeatable** through trade-body, outbound and affiliate channels.
3. **That a customer is worth £225 per month** across all streams at target attach.

We are not asking for capital to discover whether there is demand. We already have that evidence.

We are asking for a loan against a business that has already proven it can acquire customers - to convert the demand it already has. On the base case, the repayment represents 1.1% of monthly revenue by month six, and 0.3% by month nine.
